The MAILING DATE of this communication appears on the cover sheet with the correspondence address							
Period for Repty A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION. - Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a repty be timely filed start SN (6) MONTH'S from the mailing date of the communication. - If NO period for repty is specified above, the maximum statutory period will apply and will expire SN (6) MONTH'S from the mailing date of this communication Failure to repty within the set or evanded period for repty will by statute, cause the application to become ARMONONED (30 U.S.C, § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patter term adjustments. See 37 CFR 1.704(b)

DETAILED ACTION

Drawings

The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the deflecting members on the supporting surface positioned to the periphery of the upper supporting surface of claims 11-12 must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.

Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Specification

 The specification is objected to as failing to provide proper antecedent basis for the claimed subject matter. See 37 CFR 1.75(d)(1) and MPEP § 608.01(o). Correction of the Application/Control Number: 10/586,944

Art Unit: 3651

following is required: The term deflecting member is not used in the specification and it is unclear what part of the apparatus illustrated in the figures forms such a deflecting member.

Appropriate correction is required.

Claim Rejections - 35 USC § 102

 The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- Claims 1, 4-12, and 16-19 are rejected under 35 U.S.C. 102(b) as being anticipated by Rohwetter et al. (US 5,443,149).

Rohwetter et al. shows an apparatus that is used for orienting block shaped bodies 32 into a desired position. The apparatus includes a two part upper turntable 22/24 with an upper block supporting surface and a lower turntable 16 with a lower block supporting surface 14. The upper and lower turntables rotate in the same direction at different speeds (col. 4, ln. 3-8). The upper supporting surface includes a section 23 shaped as part of a cone sloping downwardly toward the lower supporting surface. The lower supporting surface extending outwardly of, and below, the upper supporting surface toward a peripheral wall 19 outwardly spaced therefrom. The upper supporting surface, the upper turntable, the lower supporting surface and the peripheral wall define a gutter dimensioned 18 to receive blocks therein in a substantially longitudinal orientation thereof. The peripheral wall is stationary and it defines the outside limit of the gutter with the turntables rotating inwardly thereof. An outlet is provided at a downstream end of the gutter to allow oriented blocks to be discharged from said apparatus. The outlet includes a guide

extending downstream from the gutter that is formed by a pair of straight, parallel, and vertical stationary walls 39 and 43. The outside wall 43 is substantially a continuation of the peripheral wall. A spiral shaped guiding wall 78 is provided above the upper turntable to guide the blocks gradually outward along the upper supporting surface toward the periphery thereof. This wall may also be viewed as forming a deflecting wall positioned close to the periphery of the upper support surface. The arrangement allows blocks fed to the apparatus to be received by the upper turntable, positioned in the gutter, and discharged via the outlet. Thus Rohwetter et al shows all the structure required by claims 1, 4-12, 16-17, and 19 which operates with all the steps required by claims 18 and 20-21.

Claim Rejections - 35 USC § 103

- The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all
 obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- Claims 2-3 are rejected under 35 U.S.C. 103(a) as being unpatentable over Rohwetter et al. in view of Martisala (US 5,549,189).

Rohwetter et al. shows all the structure required by the claims except for the central sloped cone structure required by claims 2-3. However, Martisala shows an apparatus for orienting articles on an upper turntable 27 that has a cone shaped central sloping structure.

Martisala teaches that this sloping structure facilitates a downward movement of the articles toward the periphery of the turntable (col. 6, ln. 18-20). Therefore it would have been obvious to one of ordinary skill in the art at the time of the upper turntable of Rohwetter et al.

Art Unit: 3651

Allowable Subject Matter

Claims 13-15 are objected to as being dependent upon a rejected base claim, but would
be allowable if rewritten in independent form including all of the limitations of the base claim
and any intervening claims.

Conclusion

 The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to MARK A. DEUBLE whose telephone number is (571)272-6912. The examiner can normally be reached on Monday through Thursday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Gene O. Crawford can be reached on (571) 272-6911. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
